

## BENCH SHEARS

---

No. 410-980, 410-981, 410-983

### INSTRUCTIONS:

Prepare the sheet to be cut by marking a visible line with a marker or scribe. Position the sheet in the bench shear so that the marked line is positioned where the upper and lower blades meet. Pull down on the handle, making certain your fingers are clear of the blades. When the handle is pulled down, the material locking bar will keep the sheet from moving as it is cut. For cutting rods or plates up to 10 gauge (0.100").

MODEL NO.	BLADE LENGTH
<b>410-980</b>	4 <sup>3</sup> / <sub>4</sub> "
<b>410-981</b>	6"
<b>410-983</b>	8"

**CAUTION:** *This bench shear should be bolted to a sturdy surface before using. As with any cutting tool, caution should be used at all times when operating this shear. Make certain that fingers are clear of the cutting blades before pulling down on the handle. This is especially important when cutting small pieces that require holding the material close to the blades.*
